CS 301R · REPO AUDIT

Can a Stranger Get In?

Auditor _____

Project audited _____

Tag or commit _____

You are the stranger. Clone the tag you were given into a new folder and follow the project's own docs **exactly as written**, thinking out loud. Don't fill gaps from what you know, and don't ask anyone for help. **Record what happened, not a grade.** Every place you stall, guess, or work around something goes in the stall log.

1 · Get it running

Mark one result per step and the minutes it took; for any trouble, write its stall-log number (part 4) in the last column

STEP	RESULT	MIN	STALL #
a Find the setup guide from the README	☐ as written ☐ guess / workaround ☐ step wrong or missing ☐ couldn't		
b Prerequisites: what, which versions	☐ as written ☐ guess / workaround ☐ step wrong or missing ☐ couldn't		
c Install the dependencies	☐ as written ☐ guess / workaround ☐ step wrong or missing ☐ couldn't		
d Configure: settings, secrets, database	☐ as written ☐ guess / workaround ☐ step wrong or missing ☐ couldn't		
e Run the tests	☐ as written ☐ guess / workaround ☐ step wrong or missing ☐ couldn't		
f Run it and see it work	☐ as written ☐ guess / workaround ☐ step wrong or missing ☐ couldn't		

As written: the docs alone got you through. **Guess / workaround:** you got through, but only by guessing or doing something the docs didn't say. **Step wrong or missing:** the docs were wrong or skipped something, and you had to find it yourself. **Couldn't:** you couldn't get past it.

2 · Find your way

From the docs first; search the code only when they run out

What this project is, in one sentence of your own:

A good first issue I picked: # **Where I'd change the code (file, function):**

I found that place ☐ from the issue's *where to start* or the docs ☐ by searching the code ☐ couldn't find it **Minutes:** _____

3 · Read the project's history

Two minutes of skimming; check what's true

☐ The commit log reads as a story of changes
☐ The board matches what the repo shows
☐ The README's status matches what you just ran
☐ Pull requests say what changed and why
☐ Known issues are listed where a newcomer will see them
☐ You can tell where to ask a question

4 · Stall log

Every stall, guess, or workaround; number them and put the number in part 1

#	STEP	WHAT HAPPENED (THE EXACT ERROR OR THE CONFUSING LINE)	WHAT I DID
1			☐ guessed ☐ searched ☐ skipped ☐ stopped
2			☐ guessed ☐ searched ☐ skipped ☐ stopped
3			☐ guessed ☐ searched ☐ skipped ☐ stopped
4			☐ guessed ☐ searched ☐ skipped ☐ stopped
5			☐ guessed ☐ searched ☐ skipped ☐ stopped
6			☐ guessed ☐ searched ☐ skipped ☐ stopped

The one thing that most stopped me, and what would have fixed it

Auditor's signature _____ Received by the authors (initials) _____

Facts, not a score. Hand the signed sheet to the instructor. It's photographed and given back to the authors, who turn it into their fix list.
