

Pitch Evaluation Sheet

Pitch / presenter _____

1 · Score the idea — 1 weak · 2 adequate · 3 strong

The same yardstick you've used since Week 3. Score the **idea as pitched**, not the presenter's likability — and each criterion on its own, not against the last pitch.

CRITERION	WHAT A 3 LOOKS LIKE	SCORE		
Value / real need	A specific, reachable userbase with an evidenced, felt need	1	2	3
Feasibility	Risks named honestly; scope, stack, and mitigation credible	1	2	3
Richness / breadth	Several engineering dimensions; room for a team to grow into	1	2	3
Scope realism	The MVP plausibly fits the real build window — roughly five weeks	1	2	3
Extensibility	Others could credibly keep building on it	1	2	3
Maintainability	A tractable stack the team could own, explain, and support	1	2	3
Preparedness	Knows the idea's weaknesses; answered questions honestly	1	2	3

Would you join this project? ☐ Yes ☐ Maybe ☐ No

Answer as an outside observer: if you walked in with no project of your own, looking for something worth a semester — would this be it? "I already have my own idea" is not an answer; everyone does. Checking Yes commits you to nothing.

Why — one line: _____

Strongest moment of the pitch — shared with the presenter, anonymized

Sharpest concern — name the criterion; write the sentence you'd want to receive

Score during Q&A · hand in before the next pitch begins · "Yes" is a signal, not a compliment
